BAD EXAMPLE

Character reference, original artwork & T. rex pilot production test

AGENT HANDOFF / USE INSIDE THE EXISTING KINEMA STUDIO BUILD

What this pack is asking the agent to do

This is a production test project for Kinema Studio, which is already under development.

THE JOB

Import the original Bad Example reference artwork, preserve its recognisable character designs, and use the existing Kinema features to produce a real, playable animated pilot sequence.

Do not restart Kinema Studio, rebuild the homepage, create another pricing page, or treat a static UI mock-up as successful delivery.

BUILD / INTEGRATE

- A dedicated Bad Example project with imported assets.
- Character identities, scene references, script and storyboard.
- Working audio and animation generation or controllable 2D motion.
- Live-linked review and a real exported video.

DO NOT COUNT AS COMPLETE

- Screenshots pretending to be video output.
- Hard-coded or fake generation results.
- Character art silently drifting between scenes.
- Replacing the designs with unrelated new AI characters.
- Claiming integrations work without verified output.

The demon host - primary artwork

Origi

Host: animation and personality rules

Use the reference sheet for shape language; use the written requirements below for acting and audio.

IDENTITY LOCK

- Adult-looking female demon; pale warm skin and gold/amber eyes.
- Large curved black horns, pointed ears and a spade-tipped tail.
- Long, messy, dark brown-to-black hair; never redesign hair or horns per shot.
- Oversized cream/off-white jumper, casual dark bottoms/boots when visible.
- Readable 2D hand-drawn cartoon/anime-influenced linework.

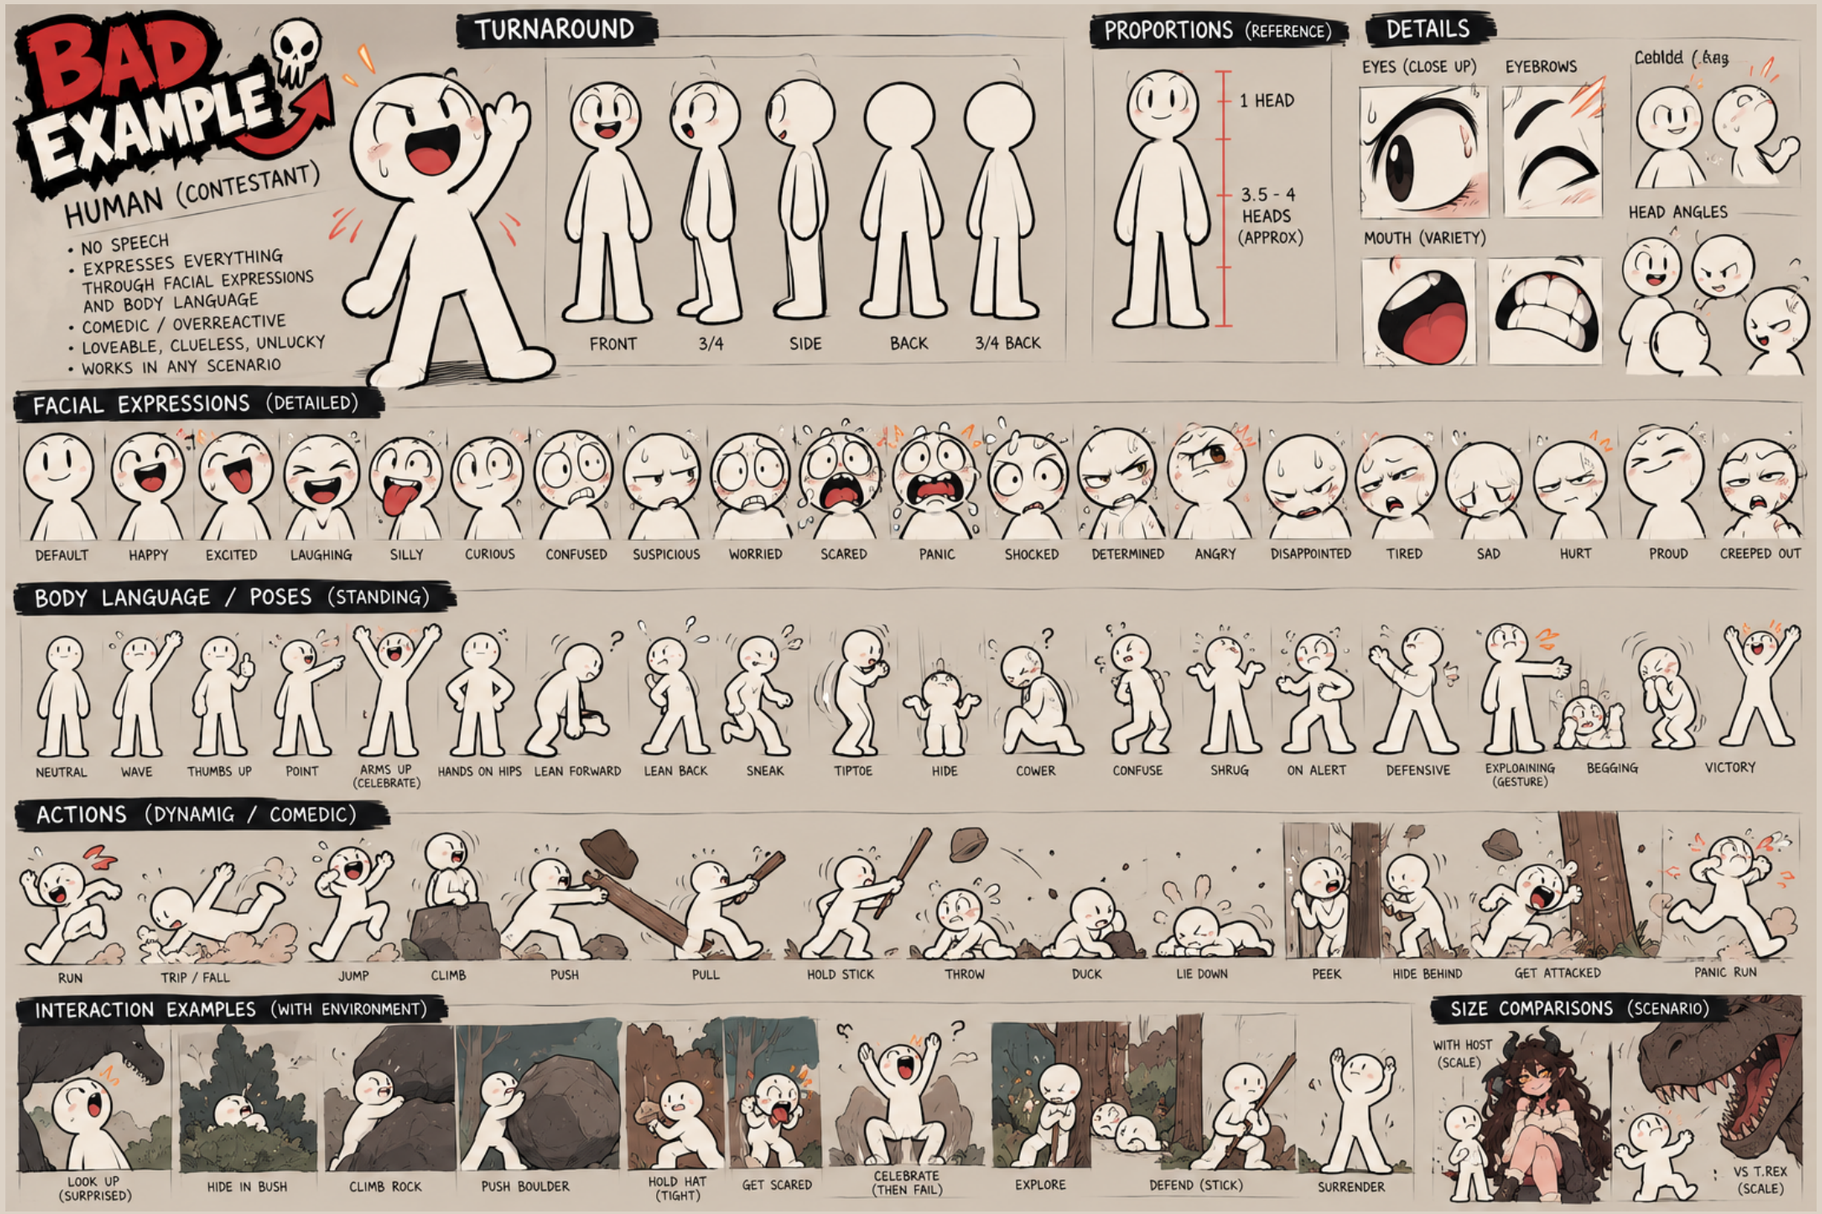
PERFORMANCE

- Dry, sarcastic, mischievous; relaxed rather than hyperactive.
- Comedic timing uses half-lidded looks, slight smirks, long pauses and understated reactions.
- Acts as the show host: watches the silent contestant make terrible decisions.
- Her voice: warm, slightly low, soft, subtly sleepy and charismatic; neutral American accent.
- Record voice variants and allow direction with ElevenLabs or a compatible voice provider.

Continuity: Never alter core facial features, sweater, horns, ear shape, colours or voice identity. Source sheets may contain conflicting accent labels; this written requirement overrides them.

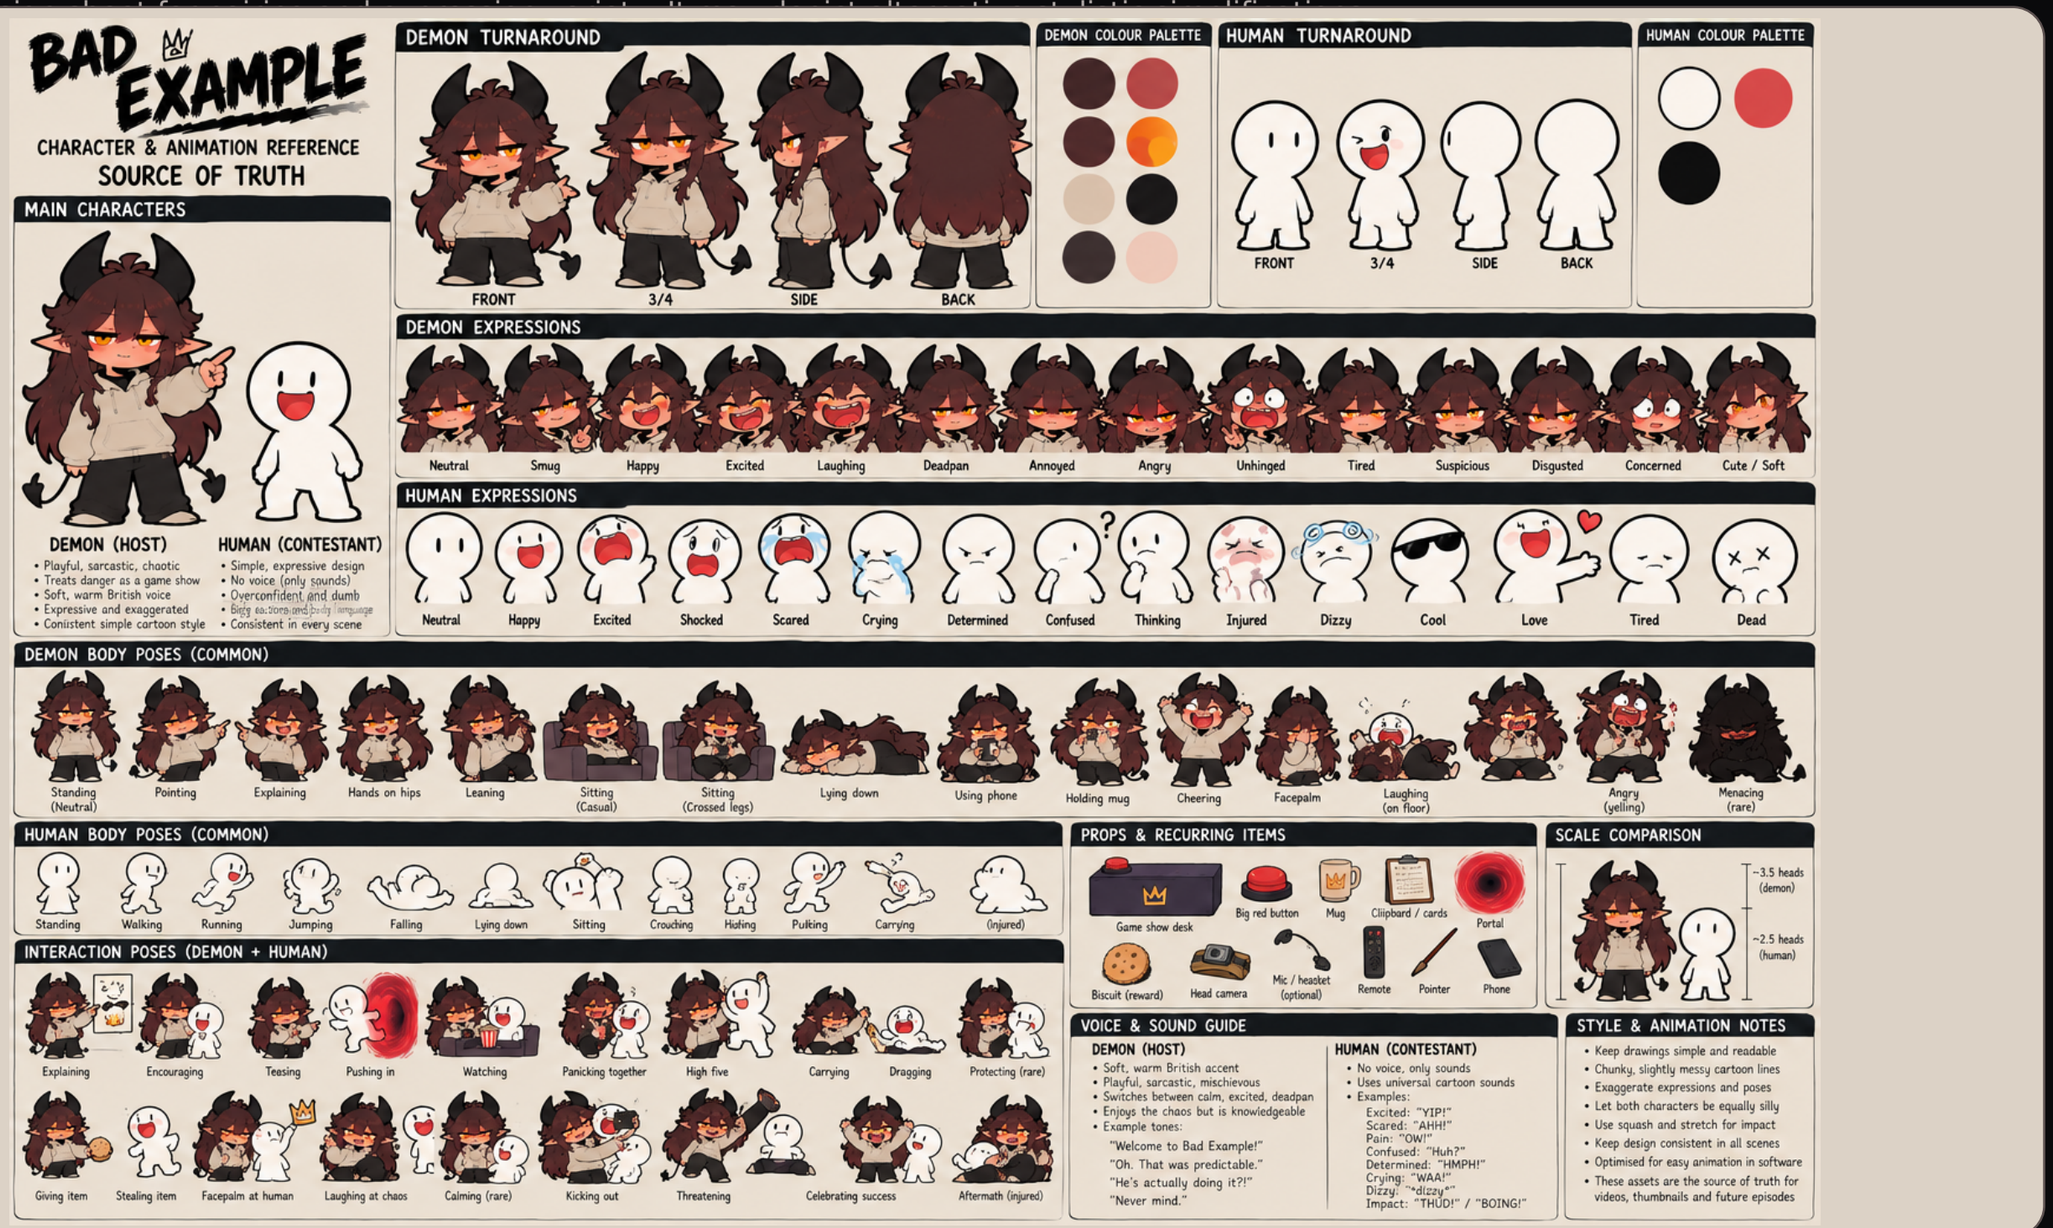
Silent human - primary artwork

The



Character interactions, poses and palettes

Supp



Human: expression, silence and T. rex costume

Treat the white silhouette and simple face as permanent. Costumes are detachable overlays.

NON-NEGOTIABLE APPEARANCE

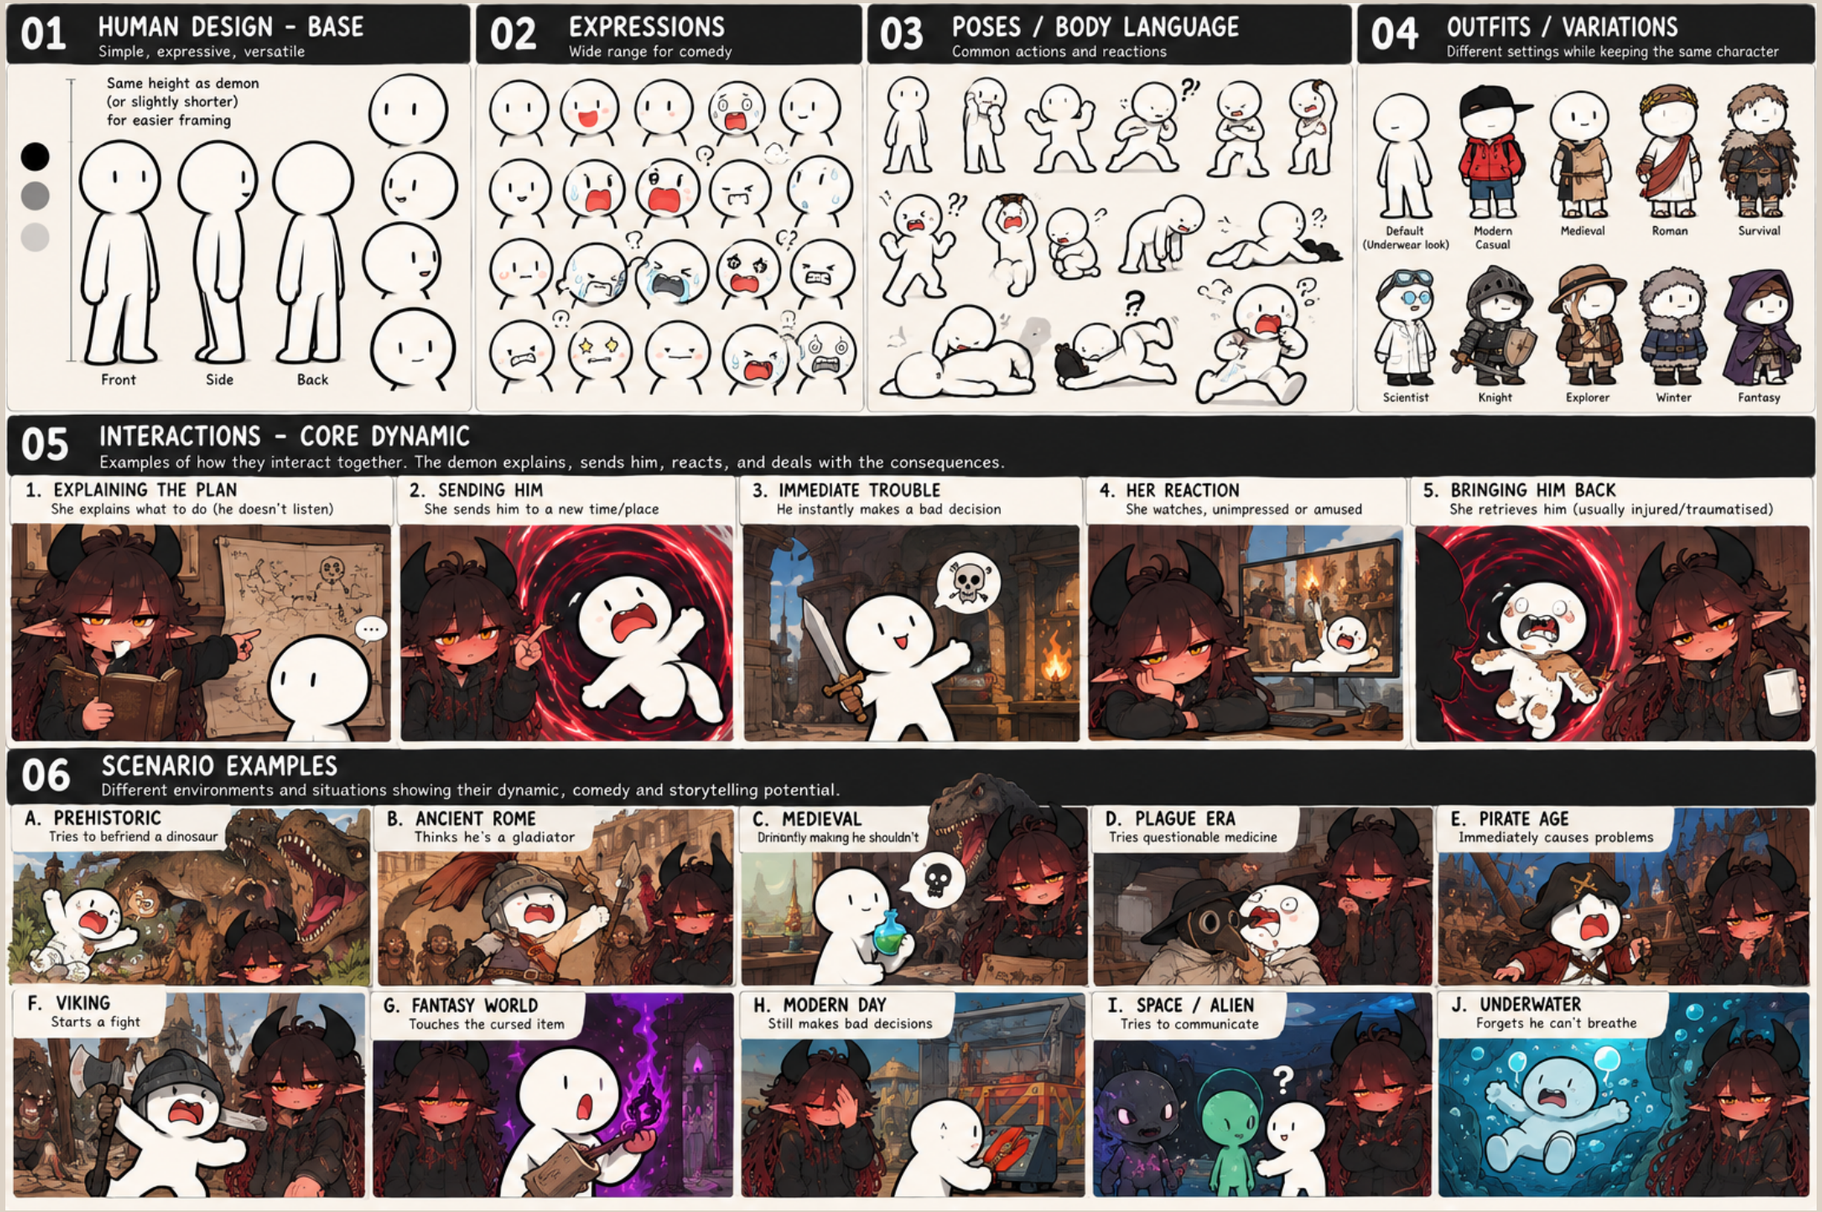
- Pure white or near-white rounded body, thick simple black outline, round head and no detailed hair or realistic facial rendering.
- Face conveys everything: highly expressive eyes, thick eyebrows, elastic mouth, blinks, anticipation, fear, relief and foolish triumph.
- His default personality is sweet, absurdly trusting, confident without justification, and physically clumsy.
- He does not speak words. Any sounds are nonverbal reactions (gasp, yelp, breath, scream, wheeze, impact).
- For the dinosaur pilot add a removable explorer/safari hat and backpack. These must not become permanent anatomy.

ANIMATION TESTS

- Create usable poses: neutral, waving, pointing, tiptoeing, confident stride, frozen dread, sprint, trip, hide and exhausted defeat.
- Create facial switches: innocent smile, clueless grin, realisation, wide-eyed panic, screaming, determined, injured and dazed.
- Demonstrate at least one facial change and one full-body move without changing line thickness, proportions, head position or limb count.
- The model must keep the human silent even if storyboard image text inaccurately implies spoken dialogue.

Expression range, wardrobe and sample interactions

Explo



Pilot opening and ending visual direction

Two original composition references: show-stage opening, and the consequences of the dinosaur challenge.

Reference intent: warm stage lights + hand-drawn character comedy; keep artwork in the same 2D world. Treat embedded sample lettering as a reference, not finished text for export.

Original 10-panel storyboard exploration

Visual

Minimum real scene sequence

S[illegible]

01 00-08s

Studio intro

Host at her desk. Character eye movement, blink and voice synced to facial animation.

02 08-16s

The dare

Host pitches the 60-second T. rex challenge; human celebrates naively.

03 16-25s

Gear and send-off

Explorer hat and backpack; silent human approves. Portal or scene transition.

04 25-35s

Arrival

Prehistoric environment. Human notices wildlife, then an ominous tremor.

05 35-45s

Reveal

T. rex appears. Human realises the danger through an expressive facial change.

06 45-58s

Bad decision

Human tries something foolish. Host comments over the action; comic pause.

07 58-72s

Chase / near miss

Animated run cycle, environment motion, dinosaur scale and sound effects.

08 72-85s

Result + callback

Return to stage. Status/result gag and host closing one-liner.

Run Bad Example through the application already being built

Use this project to discover and repair gaps in the existing creation pipeline.

1

Create project

Create Bad Example / Pilot 01 inside the current Kinema workspace, with a series-level reference library.

2

Import and pin assets

Import all six source images. Mark primary host/human references, lock palettes and character identifiers.

3

Write / approve plan

Use the AI Director to propose scenes, script, props and timing. Human creator can edit every step.

4

Generate stills and options

Produce several candidate keyframes per scene from selected image providers; keep original references linked.

5

Produce motion

Use working local 2D cut-out/layered movement or available image-to-video provider for selected shots.

6

Direct voice / SFX

Generate host dialogue with emotion and pauses via ElevenLabs or another configured voice provider; use nonverbal SFX for human.

7

Edit and QA

Connect storyboard to timeline; preview audio + picture, compare candidates, fix drift, retry only affected shots.

8

Export and prove

Render a real MP4 with correct sound, durations and character continuity; save production project and logs.

Acceptance criteria: evidence, not attractive placeholders

The agent must show the real scene pipeline, export artefacts and remaining technical limitations.

MINIMUM VERIFIED OUTPUT

- Original character assets are imported in the existing app and can be opened/viewed.
- Character references stay connected to corresponding scenes, prompts and candidates.
- At least 3 visibly different human expressions and 3 distinct host acting states.
- At least one actual animated human movement, not a Ken Burns zoom on still art.
- At least one host voice performance with editable timing and audio playback.
- A live scene/storyboard-to-timeline relationship is demonstrated.
- One real exported MP4 with intelligible audio and non-placeholder moving images.

REVIEW & TRACEABILITY

- Side-by-side reference vs. generated shots for continuity checks.
- No unexpected extra arms, horns, tails, fingers or missing costume pieces.
- Same style, linework and silhouette across the selected sequence.
- Contestant remains speechless; host keeps one recognisable voice identity.
- Known imperfections openly listed with timestamp and reproducible steps.
- Job costs, selected provider, input settings, outputs and failures recorded.
- Use the local machine where possible. Explain what requires a paid external API.

Definition of done: A playable pilot clip has been rendered and inspected. Everything else, including a polished UI and agent-produced prose, is supporting evidence rather than a substitute.

Exact reference files to import

The original image files accompany this PDF in a separate ZIP so the app can ingest unflattened images, not PDF screenshots.

01_Demon_Host_Primary_Character_Sheet.png

PRIMARY: host costume, horns, hair, face, acting poses

02_Silent_Human_Primary_Character_Sheet.png

PRIMARY: round white human, expressive face, movement

03_Paired_Character_And_Expressions_Reference.png

SECONDARY: pairing, palette, expressions, scale

04_Human_Poses_Outfits_And_Interaction_Reference.png

SECONDARY: pilot costume and gesture inspiration

05_Pilot_Open_And_End_Frames.png

KEYFRAME: stage layout, stage signage, closing tone

06_Trex_Pilot_Storyboard_Exploration.png

STORYBOARD: illustrative scene sequence and comic pacing

IMPORTANT: These are reference sheets and composite artwork, not ready-to-rig transparent character sprite layers. Extract or redraw clean production assets as needed, verify them against the originals, and never assume that cropped artwork is already a complete animation rig.

Instruction to the coding agent

Give this page and the accompanying image files to the agent that is already developing Kinema Studio.

BAD EXAMPLE INTEGRATION TEST - DO NOT REBUILD THE STUDIO.

Kinema Studio is already being developed. I am providing a character-and-pilot reference pack for my original animated series, Bad Example. Import the six accompanying reference images into the existing Kinema application. Use the demon host in the cream sweater and the white silent human as the fixed recurring cast. Preserve their actual designs, not a new reinterpretation. Use the supplied T. rex pilot opening/ending images and exploratory storyboard as visual guidance. Create a working Bad Example project inside the current app, produce editable scenes with linked storyboard cards, reusable character references, real animation or cut-out movement, voice direction for the demon through a connected TTS provider such as ElevenLabs, sound effects for the silent human, and real timeline editing. Generate several variations where helpful, identify continuity errors, and export a playable pilot MP4. If the current app is missing an essential capability, implement only the smallest missing functionality needed to make this test work and document the limitation. Validate actual results locally, show screenshots or recordings of the app and rendered outputs, and provide all project source assets, settings and issue logs. No monetisation, marketing, fake UI states, unrelated new features or unsupported claims of success. A real Bad Example animated sequence is the acceptance test.
